Although it is a sophisticated tool, Photoshop has a learning curve, and those learning to edit images may find that the feature set is less than intuitive. Chapter 1 walks you through the basics of using Photoshop. Chapter 1 also tells you where to find free online tutorials and how to purchase printed or online resources that teach Photoshop's features. Photoshop is a powerful and useful tool. However, Photoshop CS5 is not the only photo editor out there. Many other photo editors are available that can perform many of the same functions as Photoshop, but you may find that a simpler, more intuitive tool works best for your particular editing needs. As Photoshop continues to evolve, as new features are added, and as more and more users learn its features, some users may find that the interface is slowing down or even becoming more cumbersome. Instead, look into programs that promise to provide the functionality you want more quickly. New tools are being developed and enhanced all the time. If the software you currently use isn't working for you, try out a different program or update your existing tool. Finding the Right Photo Editor Without a doubt, Photoshop is the industry standard of photo-editing software. However, there are many other great products out there, and even more powerful tools in the works that can help you make your images look better. The following list offers some guidance to help you select the right photo editor for your editing needs. Image editors that are powerful and fast The best image editors have the following functions: Create layers — Saving, merging, and deleting layers is the most important part of the process. Photoshop, for example, has a Clear Overlays feature that removes the appearance of a layer from an image, but that layer remains there, ready to be merged back into the image. A layer is a way of saving the image the way you think it should be, and merging layers is a way of combining multiple pieces of information in an image into one seamless piece, whereas the layers found in most image editors separate the layer from the image. Adjust layers — Photoshop has the in-depth control over layers that most photo editors don't. However, Photoshop is a bit more intimidating to users who are new to layers and effects because the interface looks different from the other image editors that come bundled with your operating system. Layers often act more intuitively if you're used to working with them. For example, most photo editors present options that apply to all layers, or to

NextStop Blog Search form Ride Lanes If you're looking for a clear, predictable route on the roads in your neighborhood, you might consider signing up for a new "Ride Lanes" program. Before you do, however, know that you're not going to receive any special benefits. In reality, these are just like any other free service – you probably can't even get them on your own. But these new programs are especially good for drivers, thanks to GPS and other technological advances. They allow users to get directions to their destination via a road with a different colored lane or line than the typical red or yellow. Usually, if you are unfamiliar with an area, these are a good way to get around. Applying for one will require a few things. First, you'll need to get a smartphone app that can communicate with the lane system. Second, you will need to provide proof of insurance or liability insurance on your car and you must provide a specific license plate number. If your car or license plate number was involved in a crash, this can help prevent insurance companies from "tacking on" your cost for accidents. Finally, you'll need to provide proof that you drive often. In many cases, your insurance company will already have you registered in the program. Others, like the City of Saint Louis, don't require this, but it makes sense for those who travel often to save the cost of an annual fee. Ultimately, the program will be rolled out at the end of 2014. The application process will take about 30-60 minutes to complete. Email your entry to [contact@nextstop.com](mailto:contact@nextstop.com) with a minimum of 200 words explaining why you're interested in entering the program.
